

Gateway Users Guide

Revision: 26.05
Date: 2026-05-22

Contents

1 Overview	3
2 Use Cases	3
2.1 Periodical Temperature Measurement	3
2.2 Power on	5
3 Gateway configuration	6
3.1 Download Link It!	6
3.2 Connect to the gateway with Link It!	7
3.3 IQRF IDE	9
4 Configure MQTT settings	12
5 Configure MQTT subscribe settings	16
6 Configure scheduler	17

1 Overview

In this guide you will learn about how to use IQ Home gateways with basic setup.

2 Use Cases

2.1 Periodical Temperature Measurement

Sending periodically collected temperature values to the cloud from the sensors in the RF network can be done by using the *Scheduler* interface in the gateway.

The *Scheduler* can send periodical requests to the RF Network. The response to the RF Network requests contains the RF sensor values. The response can be sent directly to the Cloud via MQTT.

Example

In this example the scheduler requests for temperature values from IQ Home Sensors in every 10 seconds. The response will be published to the *test/topic* MQTT topic.

The scheduler can be configured in *Link It!*. You can find a step-by-step guide for Link It! [here](#).

The screenshot displays the 'Gateway Settings' page in the 'Link It!' web interface. The 'Scheduler' tab is selected in the left sidebar. The main content area is divided into two sections: 'Scheduled job' and 'Response properties'. The 'Scheduled job' section contains the following fields: 'Cron expression' (*/10 * * * * *), 'Message topic' (\$GW/iqrf), 'Request message' (Message ID: 1, DPA request: 0000.0D.00.FFFF.FF.30.01.00.00, Timeout[sec]: 0, Priority: 1). The 'Response properties' section contains: 'Publish topic' (test/topic), 'Publish QoS' (1), and 'Retain' (off). Below these sections are buttons for 'ADD RESPONSE' and 'ADD SCHEDULED JOB'. The status bar at the bottom indicates 'IQRF IDE Inactive' and 'IQRF IDE Forwarding Inactive'.

The scheduler can be configured in scheduler.conf in the Link It! Filemanager, in the terminal or over MQTT JSON API. The reference guide of the MQTT JSON API you can find [here](#).

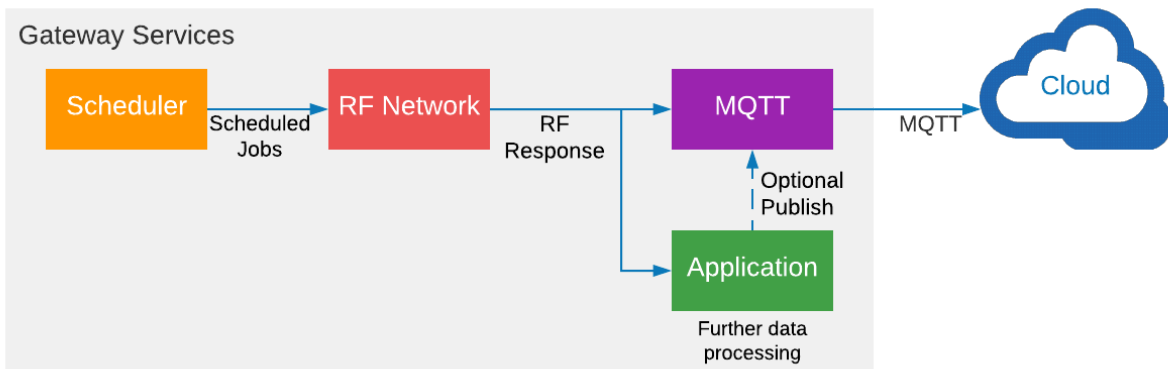

The contents of the *scheduler.conf*:

```
{
  "scheduler": [
    {
      "cron_expression": "*/10 * * * * *", <- Cron expression for every 10 sec
      "request": {
        "message_topic": "$GW/iqrf", <- RF Network target
        "message": {
          "id": "1",
          "dpa_request": "0000.0D.00.FFFF.FF.30.01.00.00", <- RF request
          "timeout": 0,
          "priority": 1,
          "publish": [
            {
              "publish_topic": "test/topic", <- MQTT response topic
              "publish_qos": 1,
              "retain": false
            }
          ]
        }
      }
    }
  ]
}
```

```

    }
  ]
}
}
]
}
}

```

**CAUTION!**

This guide assumes that you can connect the gateway to the same local network with your computer!

2.2 Power on

The gateway works with 9V-16V DC power supply. The device has no power switch. It can be turned on by connecting the power source to it. After the gateway successfully powered on and got a DHCP address the ACT status LED started blinking and the system gateway service was running.

3 Gateway configuration

The configuration of the gateway is possible via the Link It! management tool.

With Link It! Management tool the user is able to configure:

- MQTT Network settings
- MQTT topic subscriptions
- Scheduler settings
- Enable or disable implemented services

3.1 Download Link It!

To setup and manage the gateways remotely at first you have to download the IQ Home LinkIt! application from the IQ Home website according version to your operating system:

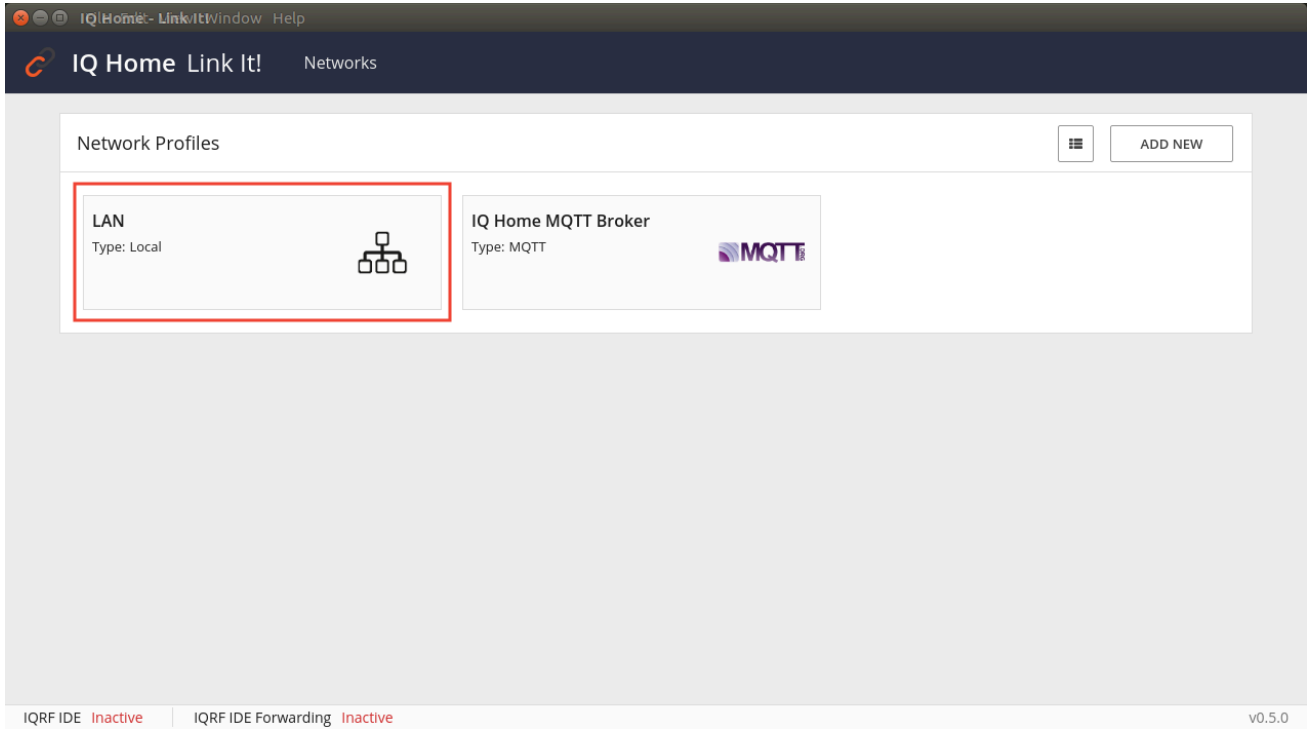

<https://www.iqhome.org/downloads#link-it!>

Extract the downloaded package and run the application from the extracted folder:

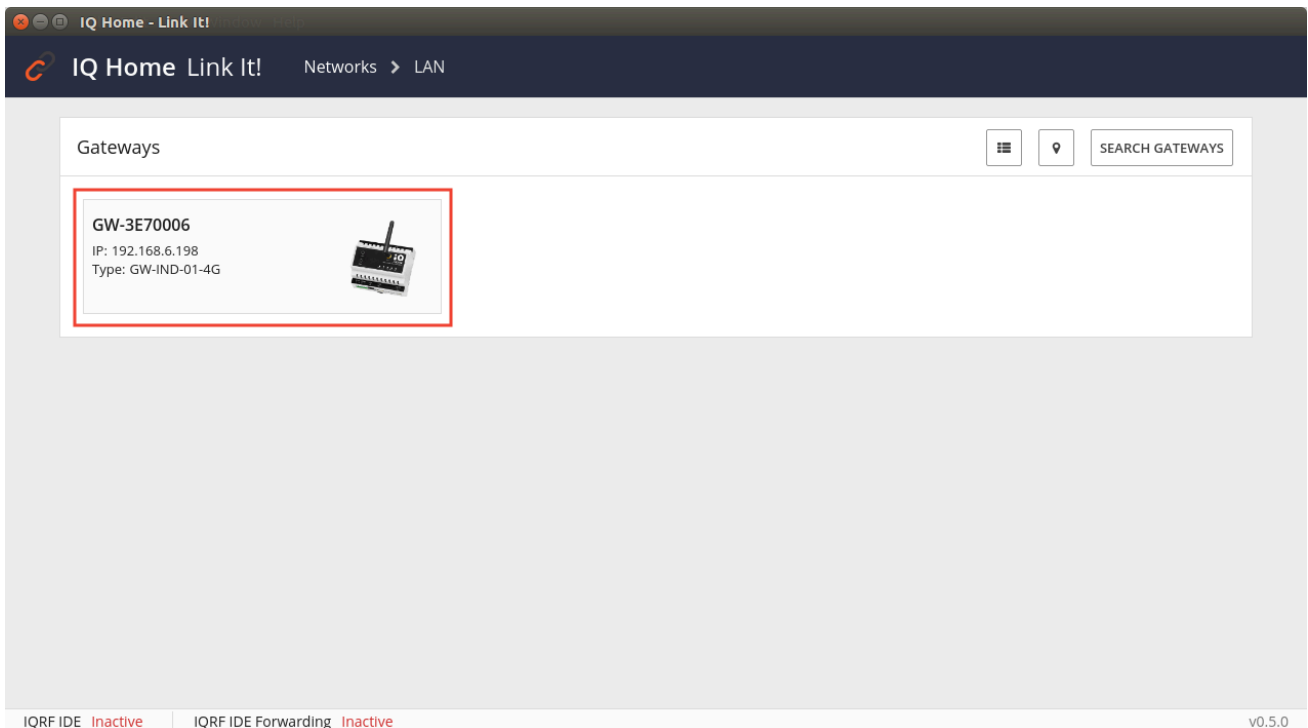

- Linux: iqhome-linkit
- Windows: IQHome LinkIt.exe

3.2 Connect to the gateway with Link It!

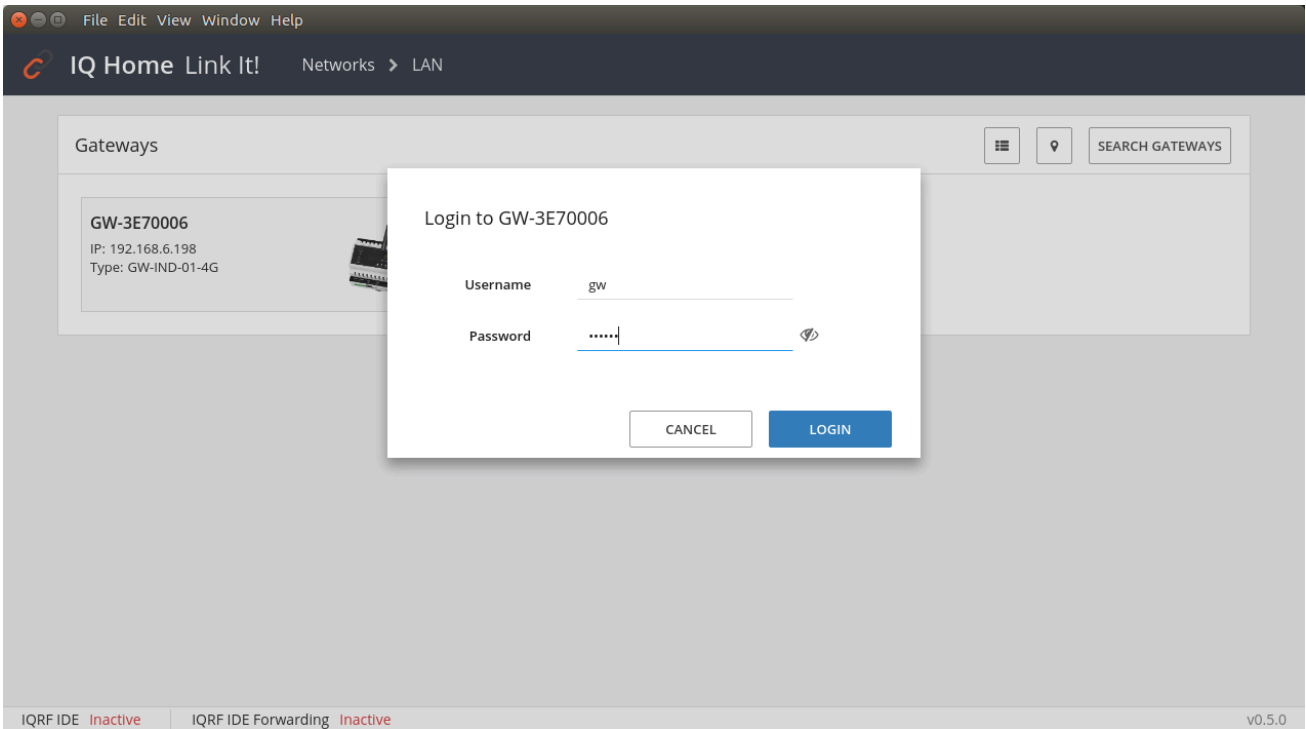

1. Click on the LAN network.

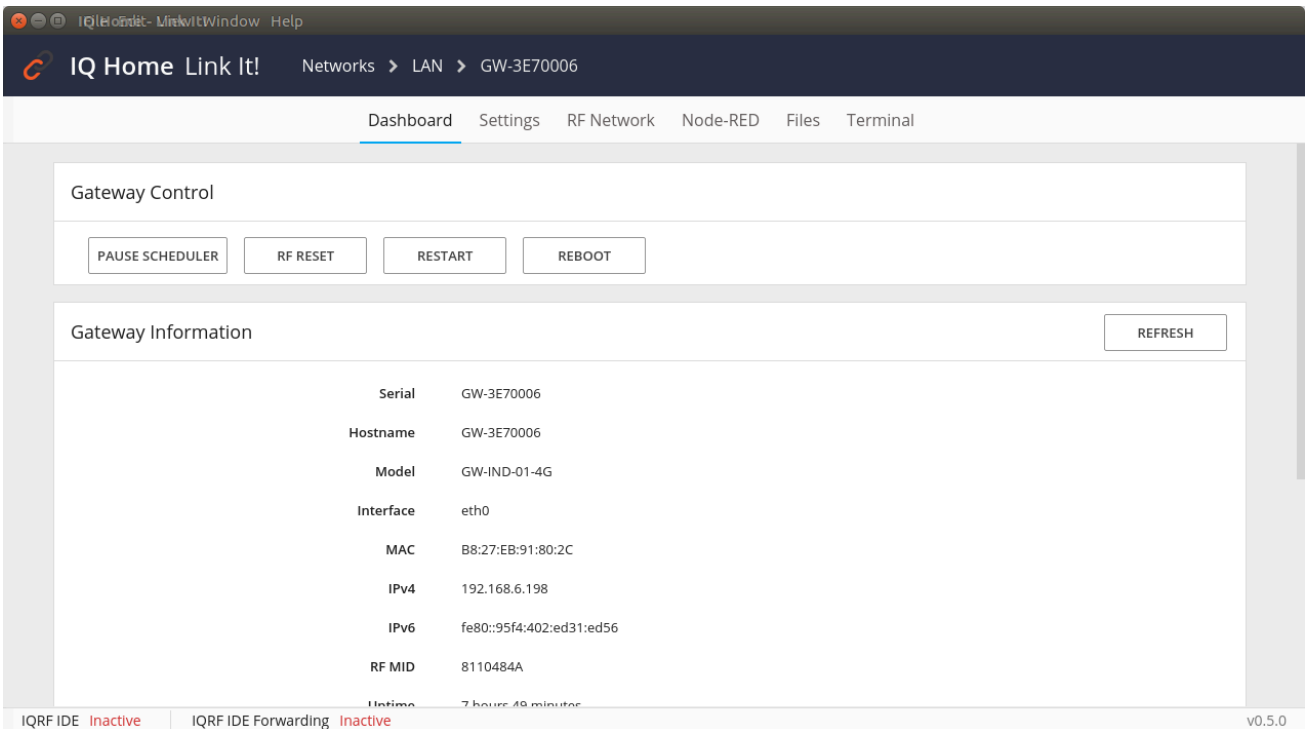

2. On the LAN network screen the Link It! will list the available gateways on the local network. Click on the gateway that should be configured.

3. Enter username and password.
 - Defaults:
 - Username: `gw`
 - Password: `iqhome`

4. After connected to the gateway the general gateway status information displayed on the *Dashboard*.

3.3 IQRF IDE

The configuration of the gateway's IQRF coordinator and the IQRF network with IQRF IDE is possible via the Link It! management tool. The IQRF IDE can connect to the gateways via Link It!. First you should connect to the gateway with Link It! Described in section [3.2](#). After that you can connect to the IQRF coordinator with IQRF IDE as described in section [3.3](#).

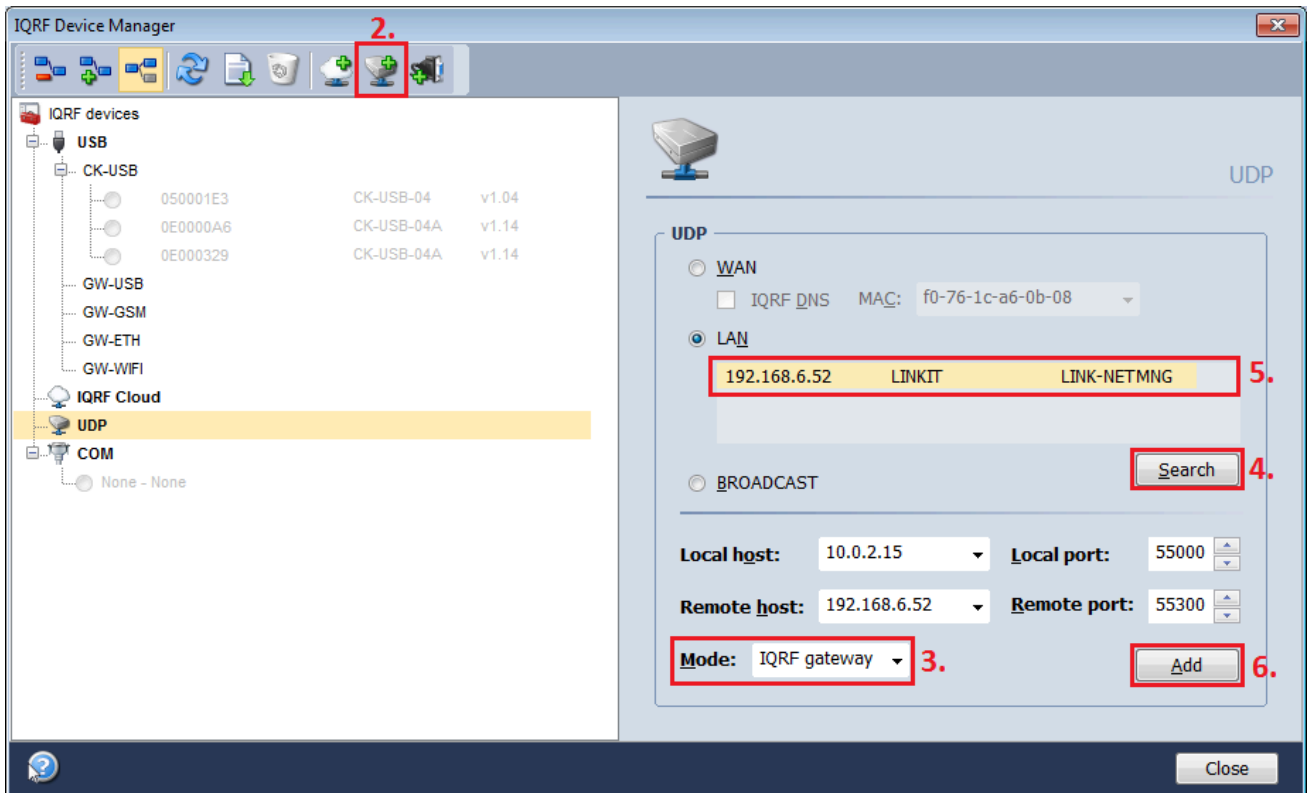

System architecture of how can connect and configure IQ Home gateways

CAUTION!

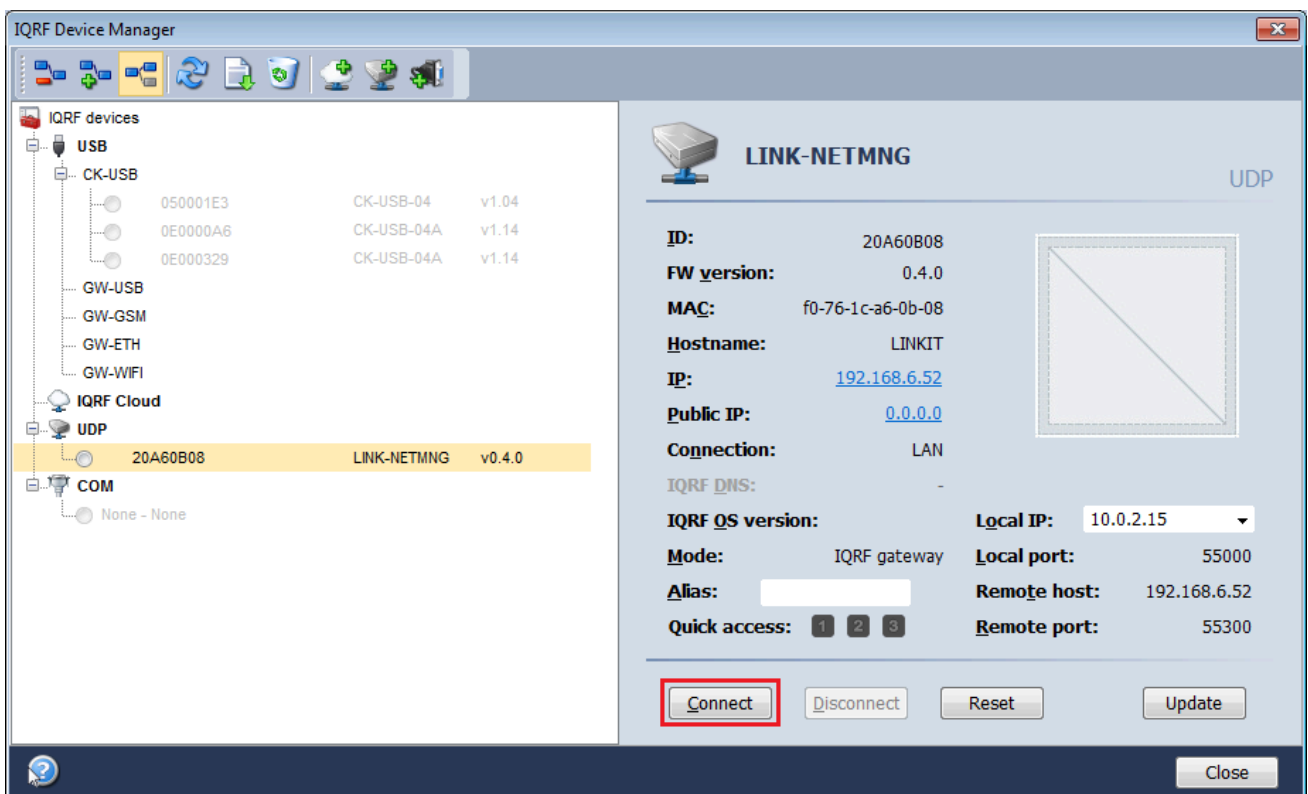

The IQRF IDE can connect to the gateway only via the Link It! by default for security reasons! For development and/or debugging you can enable in gateway configuration but it is not recommended in production use!

Follow the few steps below to connect to the IQ Home Gateway:

1. Open the IQRF IDE, open a project and choose "IQRF Device Manager" from the "Tools" menu or press F9
2. Select Add UDP device icon  in "IQRF Device Manager" (or press Shift+Ctrl+D)
3. Select *Mode: IQRF gateway*
4. Click on the „Search” button
5. Select your gateway from the list. If the list still empty check your network settings
6. Click on the *Add* button

7. After add gateway click on the *Connect* button and close the “IQRF Device Manager” window.

8. The connection indicator displays the status in the left bottom corner.

9. In the bottom status bar of the Link It! now you can see the IQRF IDE status. If you connected to a selected gateway the *IQRF IDE Forwarding* status should be *Active*.

IQRF IDE Network Management Mode | IQRF IDE Forwarding Active

10. Now you can use IQRF IDE to configure the IQRF coordinator and the IQRF network.

4 Configure MQTT settings

1. At first connect to the gateway as describe in section [2.2](#)
2. Click on the *Settings* menu.

The screenshot shows the 'Settings' page in the IQ Home Link It! web interface. The 'Gateway Information' section is expanded, displaying the following details:

Serial	GW-3E70006
Hostname	GW-3E70006
Model	GW-IND-01-4G
Interface	eth0
MAC	B8:27:EB:91:80:2C
IPv4	192.168.6.198
IPv6	fe80::95f4:402:ed31:ed56
RF MID	8110484A
Uptime	7 hours 48 minutes

At the bottom of the page, the status of 'IQRF IDE' and 'IQRF IDE Forwarding' is shown as 'Inactive'. The version number 'v0.5.0' is visible in the bottom right corner.

3. Modify MQTT Settings.

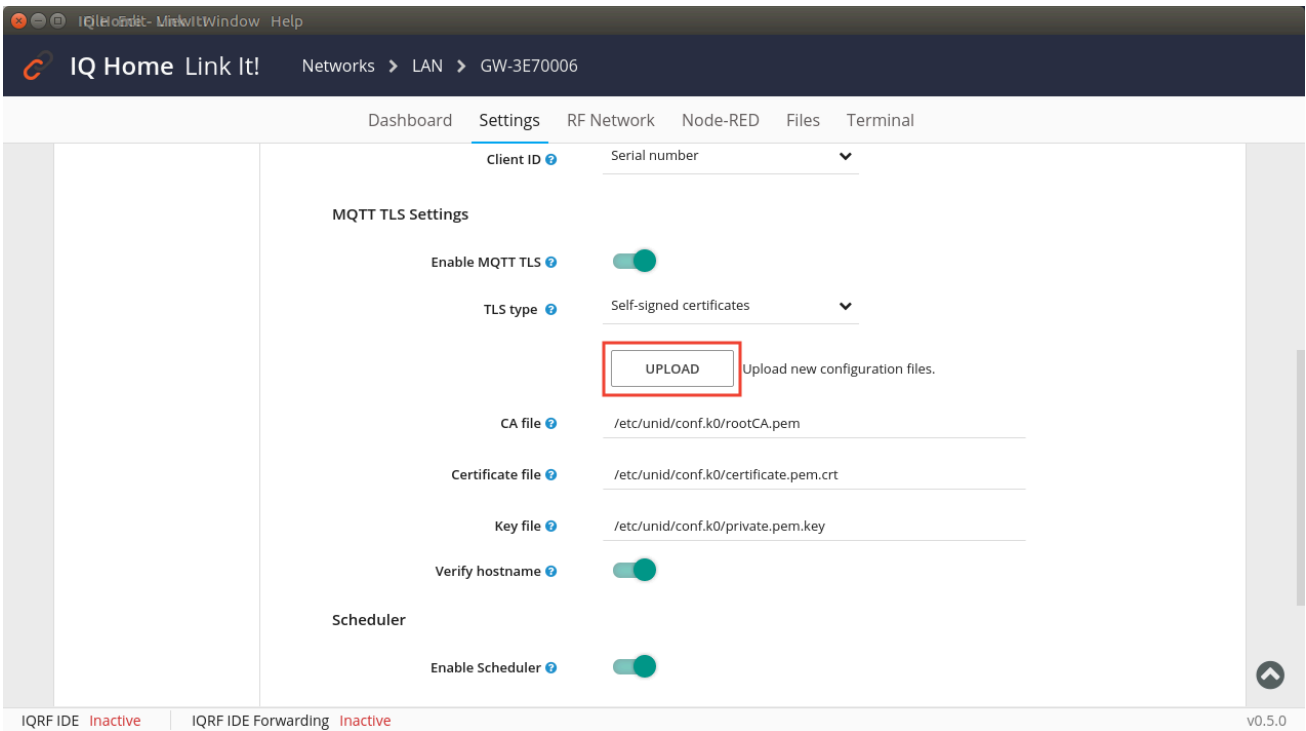

The screenshot shows the 'Gateway Settings' page in the IQ Home Link It! web interface. The 'MQTT Settings' section is active, and the 'Advanced mode' toggle is turned on. The settings are as follows:

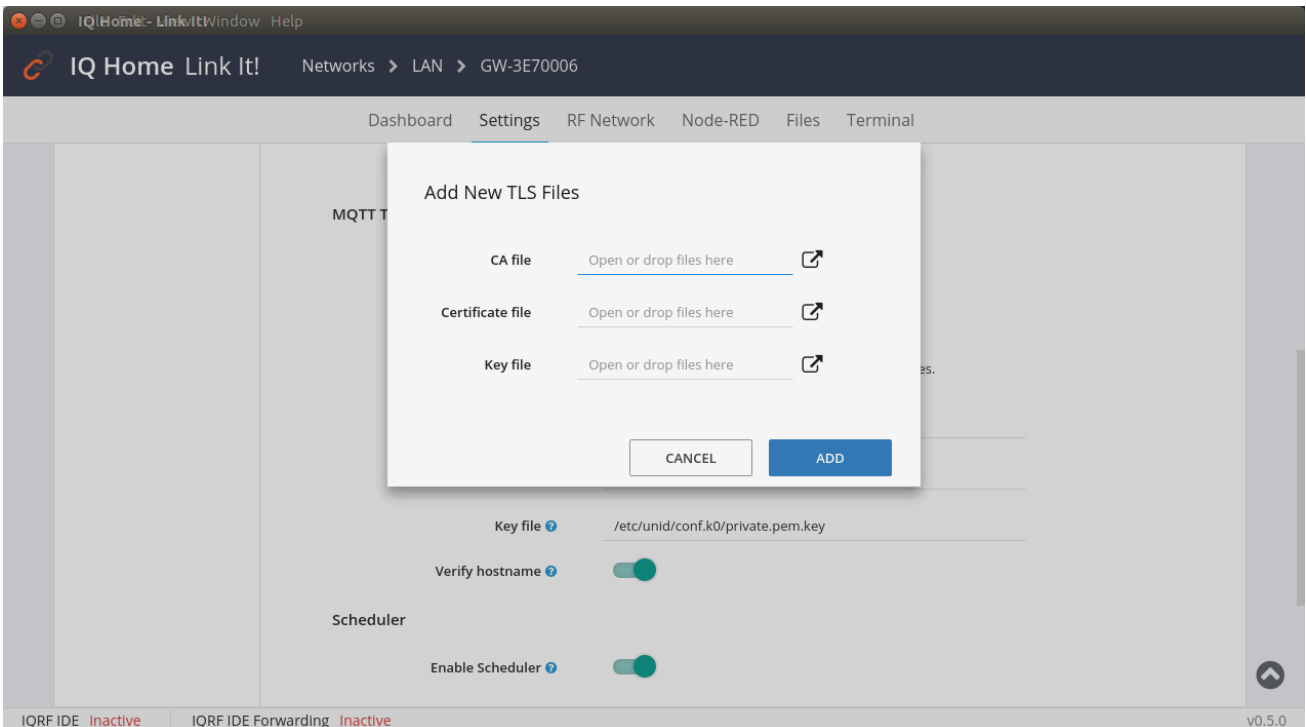

Enable MQTT	<input checked="" type="checkbox"/>
Hostname	mqtt.iqhome.org
Port	8883
Username	
Password	
Client ID source select	Auto
Client ID	Serial number

The 'MQTT TLS Settings' section is partially visible at the bottom. The status of 'IQRF IDE' and 'IQRF IDE Forwarding' is shown as 'Inactive'. The version number 'v0.5.0' is visible in the bottom right corner.

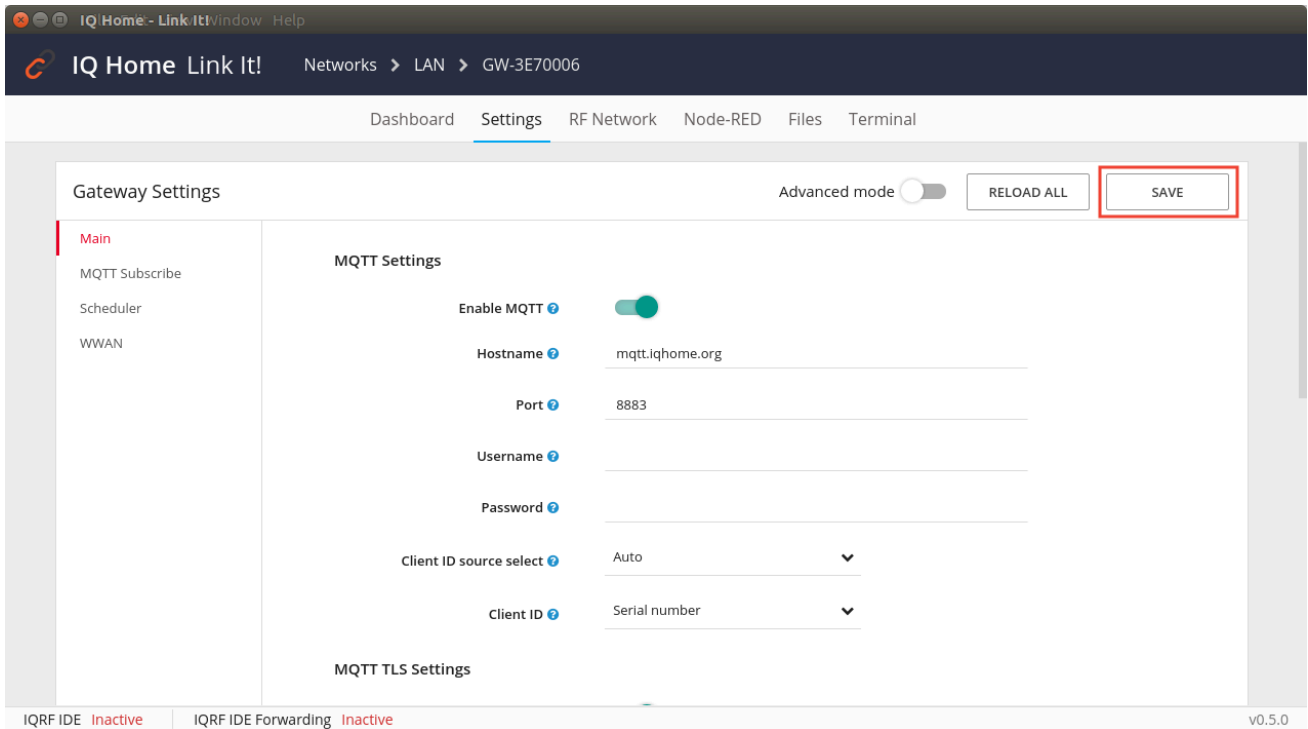

- To setup MQTT TLS settings *Enable MQTT TLS* in the configuration.
For CA signed or self signed certificates can be uploaded by clicking on the *UPLOAD* button.

- Open or Drag and Drop certificate and/or key files in the *Add New TLS Files* popup window and click on the *UPLOAD* button.

- After modifying the configuration scroll down to the end of the screen and click on the **SAVE** button.

The saving process:

5 Configure MQTT subscribe settings

The MQTT subscribe configuration can be done in the *Files* menu.

1. Click on the *Settings* menu.
2. Click on the *MQTT Subscribe* on the left sidebar.
3. Modify the configuration and click on the save icon in the toolbar.

The screenshot shows the 'Gateway Settings' page in the 'Settings' menu. The left sidebar has 'MQTT Subscribe' selected. The main content area is divided into two sections: 'Subscribe topic' and 'Reponse'. The 'Subscribe topic' section has fields for 'Subscribe topic' (iqlhome/gateway/%c/network/request), 'Subscribe QoS' (1), 'Message topic' (\$GW/lqrf), 'Broadcast request topic', and 'Broadcast response topic'. The 'Reponse' section has fields for 'Publish topic' (iqlhome/gateway/%c/network/response), 'Publish QoS' (1), and 'Retain' (toggle off). A 'SAVE' button is highlighted in a red box in the top right toolbar. At the bottom, there are status indicators for 'IQRF IDE Inactive' and 'IQRF IDE Forwarding Inactive', and a version number 'v0.5.0'.

The documentation of the subscribe configuration can be found in the *Reference Manual* on the IQ Home website: <https://www.iqhome.org/gateway-reference-manual>

6 Configure scheduler

The MQTT scheduler configuration can be done in the *Files* menu.

1. Click on the *Settings* menu.
2. Click on the *Scheduler* on the left sidebar.
3. Modify the configuration and click on the save icon in the toolbar.

The screenshot shows the 'Gateway Settings' page for 'IQ Home Link It!'. The breadcrumb navigation is 'Networks > LAN > GW-3E70006'. The 'Settings' menu is active, and the 'Scheduler' option is selected in the left sidebar. The main content area is titled 'Gateway Settings' and includes an 'Advanced mode' toggle, a 'RELOAD ALL' button, and a 'SAVE' button (highlighted with a red box). The configuration is divided into two sections: 'Scheduled jobs' and 'Reponse properties'. The 'Scheduled jobs' section includes fields for 'Cron expression' (*/15 * * * *), 'Message topic' (\$GW/lqrf), 'Request message' (Message ID: 1, DPA request: 0000.0D.00.FFFF.F0.00.00, Timeout[sec]: 0, Priority: 1), and control buttons (UP, DOWN, REMOVE). The 'Reponse properties' section includes fields for 'Publish topic' (iqhome/sensor/%c/response), 'Publish QoS' (1), and 'Retain' (toggle), along with control buttons (UP, DOWN, REMOVE). A blue 'ADD NEW RESPONSE' button is located at the bottom left of the configuration area. The status bar at the bottom shows 'IQRF IDE Inactive' and 'IQRF IDE Forwarding Inactive', with the version 'v0.5.0' on the right.

The documentation of the scheduler configuration can be found in the *Reference Manual* on the IQ Home web site: <https://www.iqhome.org/gateway-reference-manual>

The scheduler configuration automatically reloads on the gateway after successful save.
